- The Seavision Retro LED underwater light features an LED projector that can be fitted onto existing metal halide or LED underwater lights from Seavision, allowing an easy upgrade to our LED without changing the weld-in inserts or hauling the boat.
- The Seavision Retro LED is designed for boats with the Original weld-in SV14 HID and SV14 LED ranges from Seavision.
- With 20,000 lumens of light power for single colour and its wide beam angle, installation requires no modification to existing class approvals and fitting these fixtures can take as little as one hour to totally transform an existing lighting setup.
- The Seavision Retro power supply is 110-240 vac and has same footprint as the original HID ballast so no need to drill new holes.
